ABOUT STEVEN RICHARDSON

Renowned watchmaker, educator, and artisan Steven Richardson's vast career was born out of countless hours handcrafting and sculpting original works of wearable art. Under the guidance of master metalsmith Emerson Hogan, he learned how to apply age-old artisan techniques to his sculptures. Richardson's fascination with antiquity and mechanics lead him to the science of horology. His artistry and design capabilities merged naturally with his capacity to build complicated timepieces. He continued his studies under the watchful eye of master watchmaker Aaron in New York City.

As a watchmaker, Richardson gained celebrity status as commissions rolled in from long-standing, influential clients. Later, celebrities and collectors looking for fresh, uniquely crafted and complex timepieces followed suit. Now his evolution brings him back to his original roots as a sculptor, reinventing his intimate relationship with metal crafting by producing captivating works using the finest precious metals, diamonds and gemstones.
